

Python/Colab Data Analysis Project

This PDF summarizes the Python/Colab-based analysis completed for the Cognifyz Technologies internship project. The project demonstrates data cleaning, EDA, and visualization using Python libraries (Pandas, Matplotlib, Seaborn).

Votes vs Ratings (Correlation)

Conclusion

The Python/Colab analysis revealed key insights into cuisines, price ranges, delivery services, and rating behavior. Charts highlight trends across restaurants, and scatter plots showed a positive correlation between votes and ratings.

This project demonstrates advanced data analysis skills including Python scripting, data cleaning, EDA, and visualization.
